---

### 1. General product safety

The above mentioned products manufactured by FERON are safe products in accordance with article 3 of the materials description given by Regulation 2023/988 on general product safety, repealing Directive 2001/95/EC.

### 2. Quality Assurance System

Article 5 of Regulation 2023/2006 describes that it is for the contractor to define, implement and ensure adherence an effective and documented quality assurance system.

We hereby certify that our quality assurance system, a sufficient number of employees, their knowledge and skills and the organization of the premises and equipment included in a way that is necessary to ensure that finished materials and articles comply with the rules applicable to them.

The starting materials used by FERON are selected such that they meet predetermined specifications to ensure that the material or article with the rules applicable to them.

The individual operations are carried out in accordance with pre-established instructions and procedures.

According to Article 6 FERON has installed an effective quality control system and uses this. This quality control system and to include the monitoring of the implementation of good manufacturing practice and of their results and identify corrective actions to remedy weaknesses in terms of the achievement of good manufacturing practice is.

Such corrective measures shall be implemented without delay and made the competent authorities for inspection purposes accessible.

### 3. Documentation Required

According to Article 7 FERON documented the formulation and the manufacturing process, as well as the individual production stages in such a manner that the conformity and safety of the objects produced are ensured.

Furthermore, the certification according to DIN EN ISO 9001 guarantees the effective use of a quality assurance system, a quality control system and of the necessary documentation.
